Sub-Fund of Amundi Funds which is organised as a société d'investissement à capital variable ("SICAV") under the laws of the Grand Duchy of Luxembourg.	
Investment Strategy	
<ul style="list-style-type: none"> The objective of the Underlying Fund is to achieve a positive return in any type of market condition (absolute return strategy). Specifically, the sub-fund seeks to outperform (after applicable fees) the USD LIBOR 1-month index + 3% a year 1 over any given 3-year period, while offering controlled risk exposure. The Underlying Fund aims to not exceed a value at risk (VaR) of 35% (ex-ante 12-month VaR of 95%). Although the Underlying Fund typically invests most of its assets in money market instruments, its performance comes mainly from investments in US, Eurozone and Asian equity volatility derivatives. The prices of these derivatives vary depending on the anticipated volatility of equity markets in those three geographic areas (volatility measures the dispersion of an asset's returns around its average). Specifically, the Underlying Fund invests in exchange-traded options and variance swaps on indices of the United States, the Eurozone and Asia that have a one-year average maturity. Any assets that remain uninvested after the Underlying Fund has reached its target volatility exposure are invested in money market instruments. The Underlying Fund may invest up to 100% of net assets in these liquid investments. While complying with the above policies, the Underlying Fund may also invest up to 10% of net assets in UCITS/UCIs. The base currency of the Underlying Fund is US Dollar. 	Refer to Page 94 of the Underlying Fund's Prospectus for further information on the investment strategy.
