KEY FEATURES OF THE SUB-FUND

WHAT ARE YOU INVESTING IN?

- You are investing in an ILP Sub-Fund that feeds 100% into the Underlying Fund, an open-ended investment company established in Luxembourg, the assets of which are held in different sub-funds. Each sub-fund is a separate portfolio of securities managed in accordance with its specific investment objective.
- For Class A Shares, dividends will normally be declared on a yearly basis on the first Business Day of August. They are normally paid within ten Business Days of the relevant month, or as soon as practicable thereafter. Dividends are not guaranteed and are paid at the discretion of the Directors.

Refer to “Dividends” section of the Underlying Fund’s Luxembourg Prospectus for further information on the dividend payout of the Underlying Fund.

¹ For ILP sub-funds that feed 100% into an underlying CIS fund, some of the information provided below could be similar to the underlying CIS fund.

² In order for units in the ILP sub-fund to be classified as Excluded Investment Products, the investment objectives and investment focus of the ILP sub-fund, and investment approach of the manager have to be stated in the product summary:

- (a) to invest only in deposits or other Excluded Investment Products; and
- (b) not to engage in securities lending or repurchase transactions for the ILP sub-fund.

The definition of “Excluded Investment Product” can be found in Annex 1 to the Notice on Recommendations on Investment Products [Notice No. FAA-N16] at <http://www.mas.gov.sg/Regulations-and-Financial-Stability/Regulations-Guidance-and-Licensing/Financial-Advisers/Notices.aspx>.

Product-Specific Risks

You are exposed to Bonds, Debt Instruments & Fixed Income & Credit Risks

The value of bonds and debt instruments will fluctuate depending on market interest rates, the credit quality of the issuer and liquidity considerations. Investments may be adversely affected if any of the institutions with which money is deposited suffers insolvency or other financial difficulties (e.g. default). Credit risk arises from the uncertainty about the ultimate repayment of principal and interest of a bond or other debt instrument investments.

You are exposed to Derivatives Risks

The use of financial derivative instruments may give rise to leverage, liquidity, counterparty and valuations risks at times. In adverse situations, the Underlying Fund's use of derivative instruments may become ineffective and the Underlying Fund may suffer significant losses.

You are exposed to QFII Risks

There may be limited opportunities to find alternative ways of managing cash flows because of the relatively illiquid nature of markets in small and medium sized companies' shares. The share prices of such companies generally are more volatile than those of larger companies; the shares are often less liquid and these companies may be subject to more abrupt fluctuations in market price than larger, more established companies. Investments in shares of companies with smaller market capitalisations are generally considered to offer greater opportunity for appreciation but also may involve greater risks than customarily associated with more established companies as they are generally more likely to be adversely affected by poor economic or market conditions.
